

Managing Impartiality

DNV Climate Change & Environmental Services (DNV CC&ES)

The management of impartiality is imperative for DNVs delivery of validation, verification and determination services. DNVs values include that we never compromise on quality and integrity, and indeed our independence has been one of our strongest assets throughout our history.

DNV Climate Change & Environmental Services (CC&ES), delivering amongst other services CDM validation/verification and JI determination/verification, has imposed operational and managerial controls to ensure impartiality in every delivery. The service responsibilities within DNV are defined. Organisational responsibilities have been defined within DNV CC&ES where the Director of Operations, Business Support Director, Director for Services and Technologies, and Quality Manager have defined responsibilities. Further, all employees are required to have defined responsibilities

The main principle for management of impartiality is that ***We shall not verify or validate our own work.*** This means that DNV will not provide consulting services to a verification/validation customer if the consultancy activity is not acceptable in combination with verification/validation.

Main scenarios threatening DNV's impartiality have been defined. Operational tools to ensure and demonstrate impartiality on a project and individual level are implemented. Regular monitoring of impartiality management is enforced.

Further details of our procedures for the management of impartiality can be provided upon request.

Stein Bjørnar Jensen
Director of Operations
DNV Climate Change & Environmental Services
