

INCIDENT MANAGEMENT

SYNERGI LIFE

The Incident Management module lets you manage compliance requirements and analyse data across your organization

The Incident Management software module lets you analyse data across complex and multi-layered organizations so you can recognize trends and ensure overview of compliance requirements. The incident reporting software combines the most recognized principles and best practice within loss control and incident management with the latest trends in technological platforms. Synergi Life is optimized for online and offline use on various devices such as PCs, tablets and smart phones.

- Incident reporting software for systematic handling of any incident category, near misses, unsafe conditions etc.
- Incident management software solution for high-risk workplaces, for example construction sites, oil rigs, process facilities, factories
- Front-end reporting to back-office analysis and reporting in multiple report formats and dashboards
- Support for full investigation, risk evaluation, loss causation modelling and action management process
- Based on DNV's extensive experience in risk and QHSE compliance requirements and management, working with leading companies within energy, transportation, the processing industry and the public health sector
- Monitor gas quality and blending from multiple sources
- Track multiple batches in liquid systems and see when interfaces will arrive at delivery points
- Train pipeline operators using 'flight simulator' style training systems
- Manage the whole pipeline operator qualification process to satisfy HSE requirements
- Minimize system downtime with robust, reliable and accurate simulation 24/7

Key features of Incident Management software module:

- Risk matrix with traffic light indication of high, medium and low risk cases
- Documentation of loss and consequence details
- Root cause analyses - multiple model support
- Preventive, corrective and temporary actions - due dates and responsible parties
- Attached documents - statements, pictures, videos and any kind of document
- Email distribution of notifications, alerts, reminders and key lessons learned
- Trending of risk profiles for employees, business areas, work processes, critical machinery, contractors or any other object relevant for analysis
- Management of compliance requirements, including statutory compliance reporting and annual, quarterly and monthly performance reports are available online and real time
- Generation of frequencies and KPIs including LTI, TRI, RWC, Illnesses, spills, costs etc. for employees and contractors
- Best practice configurations available for rapid installation and implementation of the incident management software
