SYNERGI WATER TRAINING

Course code: SY-20
Duration: 3 days

Prerequisite:

A basic level of proficiency in the Microsoft Windows environment is assumed.

The number and relative experience levels of the attendees will dictate the speed and sometimes the content of the course.

DESCRIPTION

This is an introductory course to Synergi Water that also touches upon some intermediate concepts hydraulic modelling. Concepts of modelling potable water systems are covered with respect to how they are represented in Synergi Water. With this training, modellers will be more able to utilize Synergi Water software to learn about the operations of their system and perform what-if scenarios for planning purposes.

LEARNING OBJECTIVES

Learn how to get data to create a new model, add data to an existing model, navigate the interface and learn some intermediate modeling techniques to use within Synergi Water software.

TARGET GROUP

Hydraulic and civil engineers and technicians performing system analysis for the purpose of general system hydraulic analysis, advanced hydraulic analysis, including age and contamination, and planning purposes.
