

## DIGITAL SOLUTIONS

# SYNERGI™ LIFE

## Mobile App

With the latest version of the Synergi Life Mobile App we offer fully flexible reporting and handling to the mobile workforce. Through an intuitive and easy interface, it facilitates communication and learning, in addition to offering simplified reporting and updating of actions, fixes and mitigations.

Any module of the main Synergi Life web version can be used with the app. The seamless integration allows users to view information and communicate updates in both online and offline environments.

The app can be used with full flexibility and communication features by named users or with stripped-down reporting functions for external customers, contractors and other associates.

A number of forms and templates are provided to facilitate efficient and timely reporting and documentation of any issues, such as complaints, quality cases, ideas, risks and accidents or to support more formal activities such as audits and inspections.

To create a new entry you simply start by recording a message, taking a picture or typing a simple text to explain. Depending on the nature of the case, it is instantly registered in the back office database and distributed to those in need of the information.

By using the discussion and blogging function you can discuss resolutions and fixes with colleagues and friends until a suitable action plan is agreed. Actions are planned, performed and closed directly in the app or in the back office web environments.

Any company currently running the Synergi Life web application can download the app to an iOS or Android phone to start exploring and testing the functions. When you are ready for a larger roll-out to your company, we connect the standard app with the Synergi Life Mobile services to your database, and if needed tailor it to your specific needs and preferences.

#### BENEFITS OF SYNERGI LIFE MOBILE APP

- Facilitates cooperation and learning in an intuitive and modern way
- Easy to use for reporting of observations at all levels
- Faster and more frequent reporting
- Supports offline reporting
- Removes duplicate processes and reduces paperwork
